

I-MON 256 OEM / 512 OEM Developer's Kit

Enables Plug-and-Play Operation with the I-MON 256/512
OEM

I-MON Evaluation Software

The I-MON Developer's Kit will demonstrate the performance of the I-MON 256/512 OEM in an easy manner without the need for hardware interfacing and tedious programming from the customer's side. It enables the customer to use the I-MON 256/512 OEM with own light sources and FBG sensors using a PC as monitor and thereby test the basic performance.

The spectrum graph screen of the Evaluation Software illustrates the pixel response from the image sensor of the I-MON 256/512 OEM, i. e., the FBG sensor peaks.

I-MON OEM Developer's Kit

The software includes a range of control buttons e.g. for configuration, wavelength fit, and data logging.
